Here is the possible language:

Claim 1 (previously presented): A method of playing a video game comprising the steps of:

maintaining a library containing a plurality of series of non-identical images illustrating situations occurring at different sequential times during an event, with each series depicting a different event, ~~and with at least two images in each series, the images in each series identified as a first time image for the earliest image in the time sequence, a second time image for the second earliest image in time sequence, etc, with N total images in each series, where N is an integer equal to or greater than two, each of the images in each series identified as an nth time image, where the n+1 time image occurs in time sequence later than the nth time image, where n is an integer equal to or between one and N inclusive;~~

providing an array of frames arranged substantially in a prescribed arrangement;  
displaying in a selected frame a selected one of the first time images from said library;

displaying in another selected frame a selected one of the <sup>N</sup>second time images from said library;

establishing as a first winning condition the display in the selected frames of one of the series of time sequenced images depicting an event.

Do the later references to "first time images" and "second time images" still make sense?
